James Fisher and Sons plc
Pioneering Sustainably

# Display Screen Equipment

HSE Awareness Training

10 minutes • All employees & contractors

Con nue

# Learning Objectives

By the end of this module, you will be able to:

- ✓ Understand what DSE is and why it matters
- ✓ Recognise common health issues linked to DSE work
- ✓ Set up your workstation to support good posture
- ✓ Apply simple habits to reduce strain and fatigue
- ✓ Know when and how to raise concerns or request support

# What Is DSE?

Display Screen Equipment refers to any equipment with a display screen used as part of work activities.

**Desktop monitors** **Laptops** **Tablets** **Mobile devices**

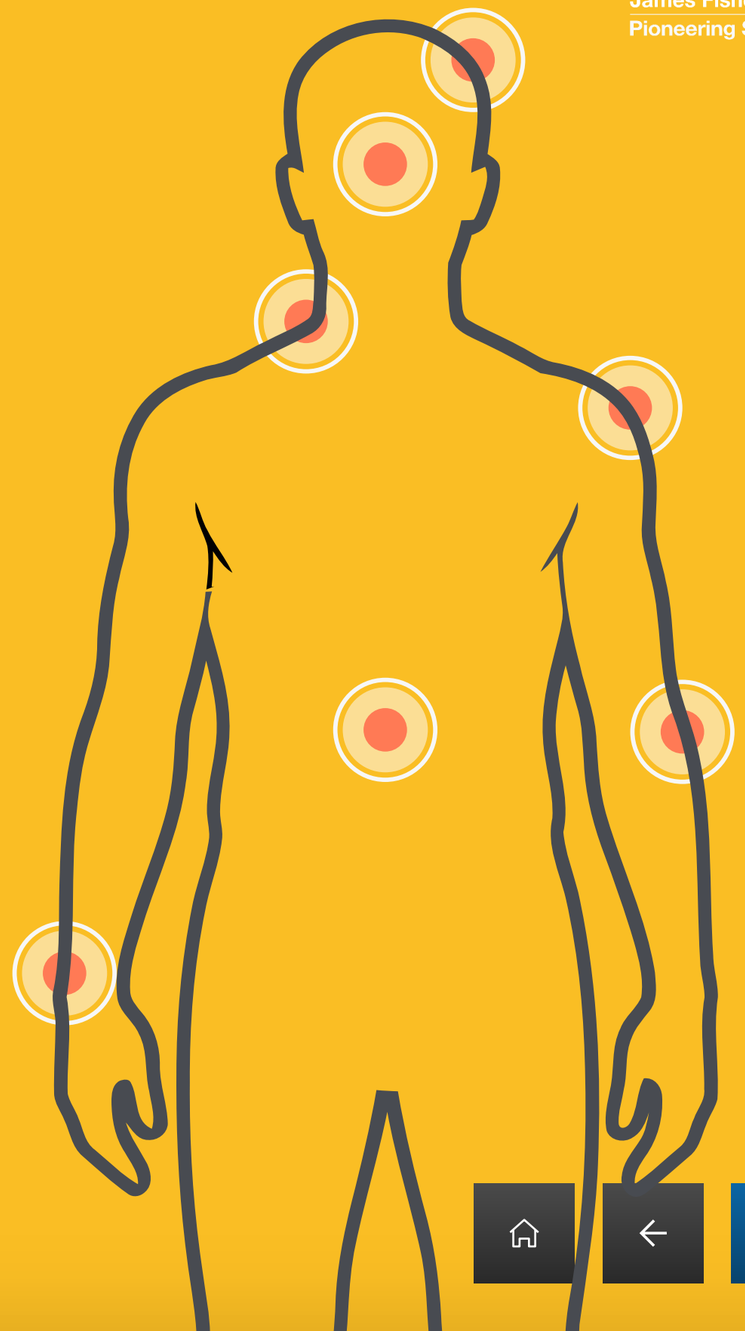
Working with DSE for long periods, especially without regular breaks or good posture, can increase the risk of discomfort and injury.

# Why DSE Safety Matters

Extended or poorly managed DSE use can contribute to a range of health issues:

- Headaches and eye strain
- Neck, shoulder and back pain
- Discomfort in the hands, wrists and arms
- Repetitive strain injuries (RSI) caused by repeated movements

These issues often develop gradually and may not be noticed until discomfort becomes persistent.



# Speak Up Early

If you experience discomfort or pain when working with DSE equipment, it's important to act early.

- ✓ Adjust your workstation where possible
- ✓ Take regular breaks
- ✓ Inform your manager or a member of the HSEQ team

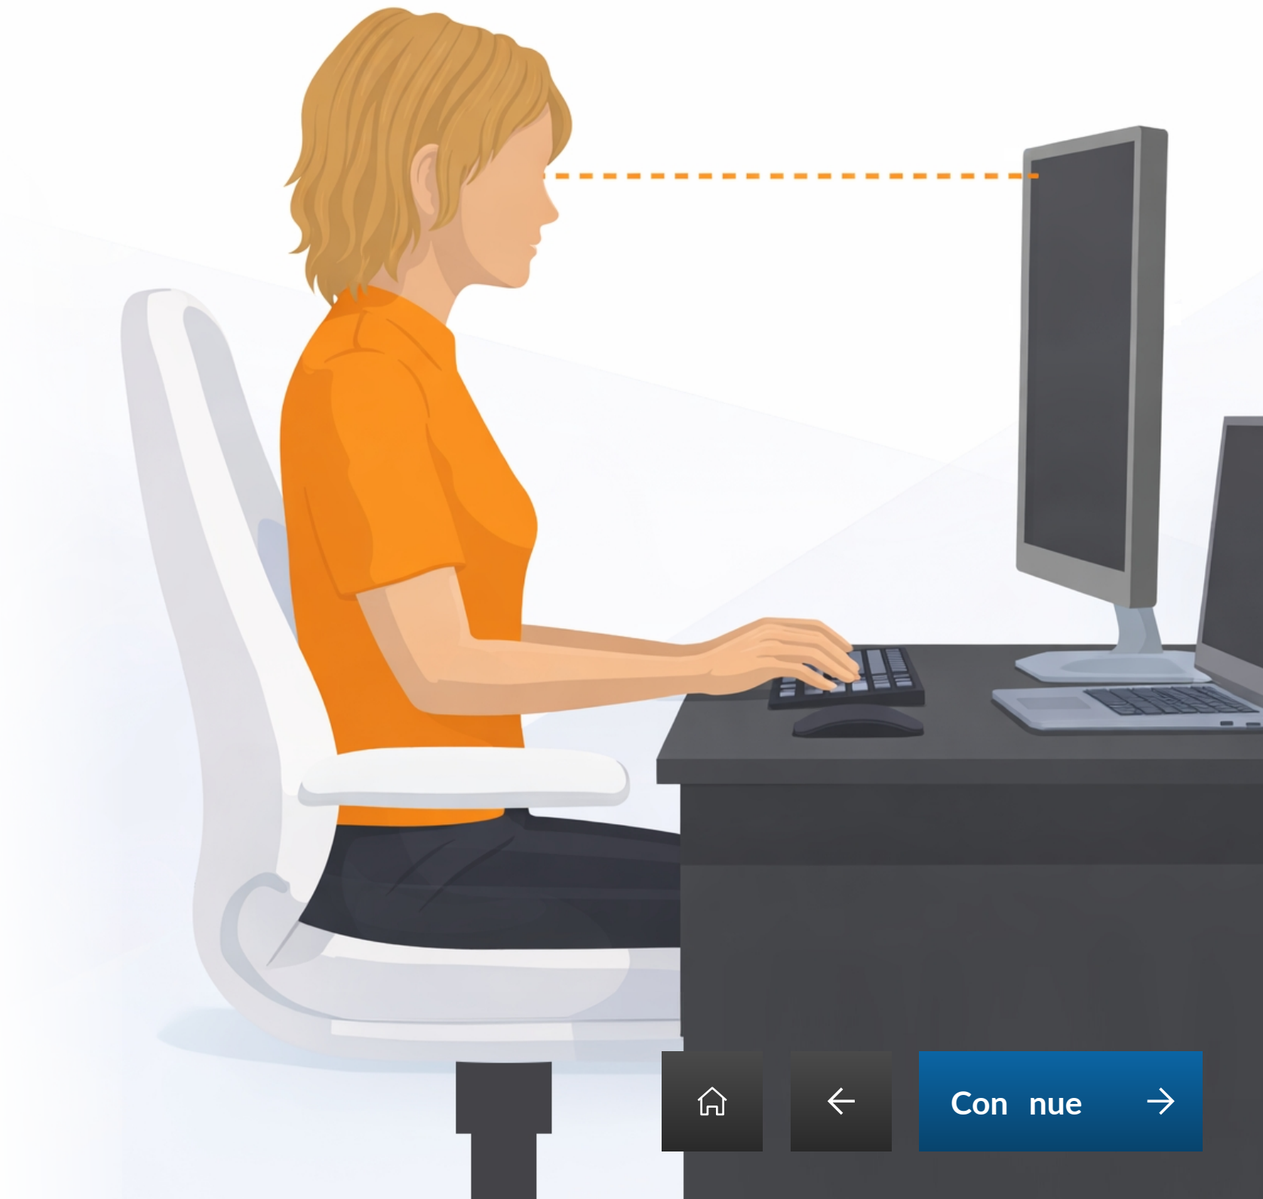
**Early action can help prevent short-term discomfort from becoming a long-term issue.**

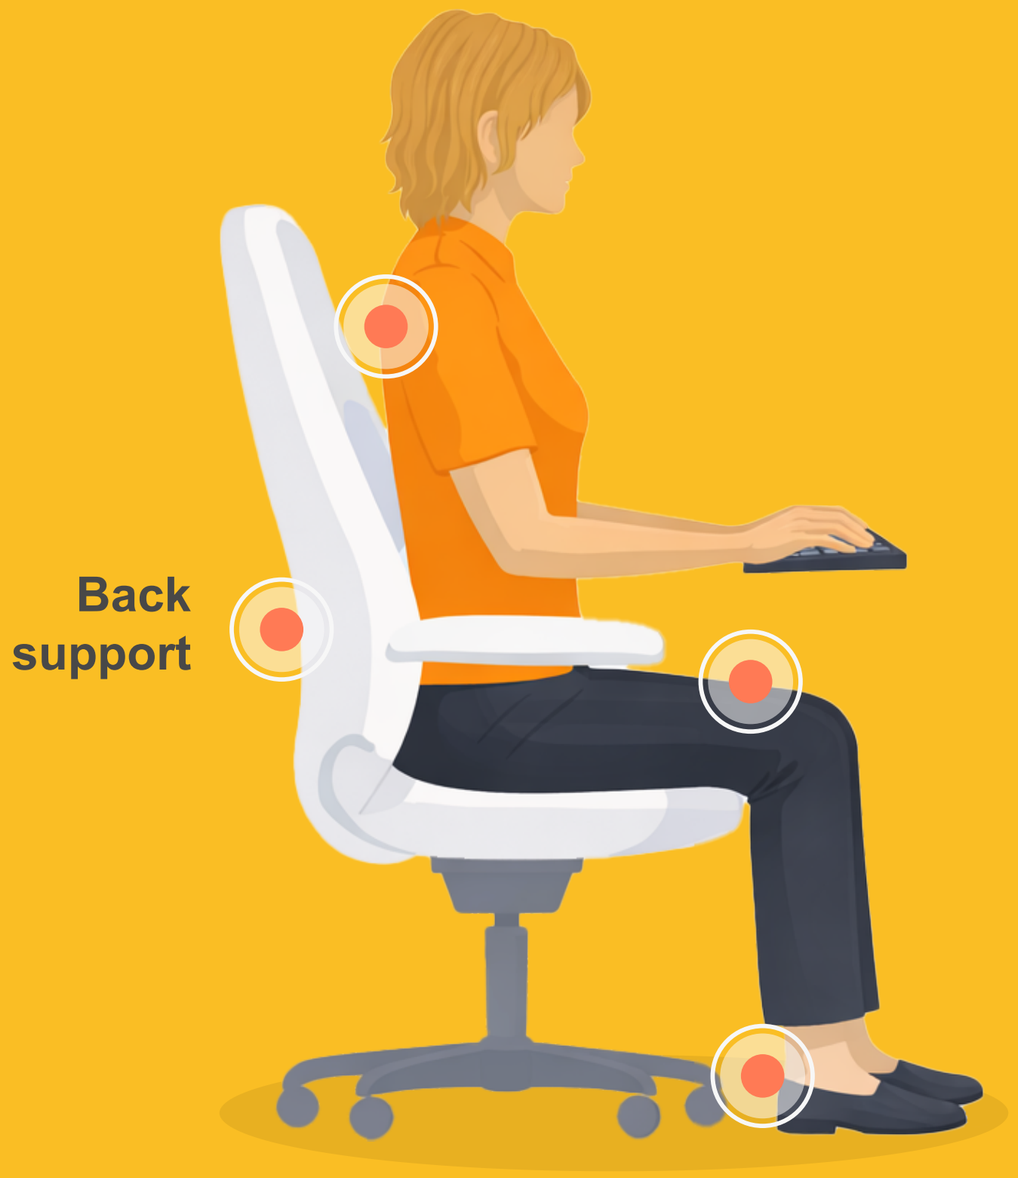
SECTION 2: SAFE DSE WORKING PRINCIPLES

# Setting Up Your Screen

Your screen should be positioned to support a neutral, comfortable posture.

- ✓ Adjust the height so the top of the screen is at, or slightly below, eye level
- ✓ Tilt the screen to avoid glare
- ✓ Position the screen directly in front of you, not to one side





# Seating & Posture

Your chair plays an important role in supporting good posture.

- Ensure your chair supports the lower back
- Adjust seat height so feet rest flat on the floor
- Keep hips level with or slightly higher than knees
- Sit upright rather than slouched or leaning forward

# Lighting & Glare

Poor lighting or glare can increase eye strain and headaches.

- ✓ Work in an area with adequate lighting
- ✓ Avoid direct sunlight on the screen
- ✓ Adjust blinds or screen brightness if needed
- ✓ Position screens away from bright windows or lights

Con nue

# Try the following exercises

# When to Request a DSE Review

You should alert your manager if:

- ✓ You experience discomfort or pain when using DSE
- ✓ Your workstation or equipment changes
- ✓ Your role or working pattern changes
- ✓ You return from injury or develop a health concern

**Where required, a new or updated DSE assessment will be completed to ensure risks are managed effectively.**

# 5 Simple Tips for Safe DSE Practices

**1**

**Position your screen correctly**

Eye level, directly in front

**2**

**Set up your chair**

Support lower back, feet flat

**3**

**Take regular breaks**

Every 30-60 minutes

**4**

**Stretch and move**

Simple exercises at your desk

**5**

**Speak up early**

Report any discomfort

# Small Changes Make a Big Difference

By setting up your workstation correctly, taking regular breaks and speaking up early, you help protect your health and wellbeing while working with display screen equipment at James Fisher & Sons.

**If you are unsure, speak to your manager or the HSEQ team**

# Module Complete!

You have completed the Display Screen Equipment (DSE) Awareness module.

## Key Takeaways

- DSE includes all screens used for work
- Position screens at eye level, directly in front
- Take breaks every 30-60 minutes
- Report discomfort early to your manager or HSEQ team
